

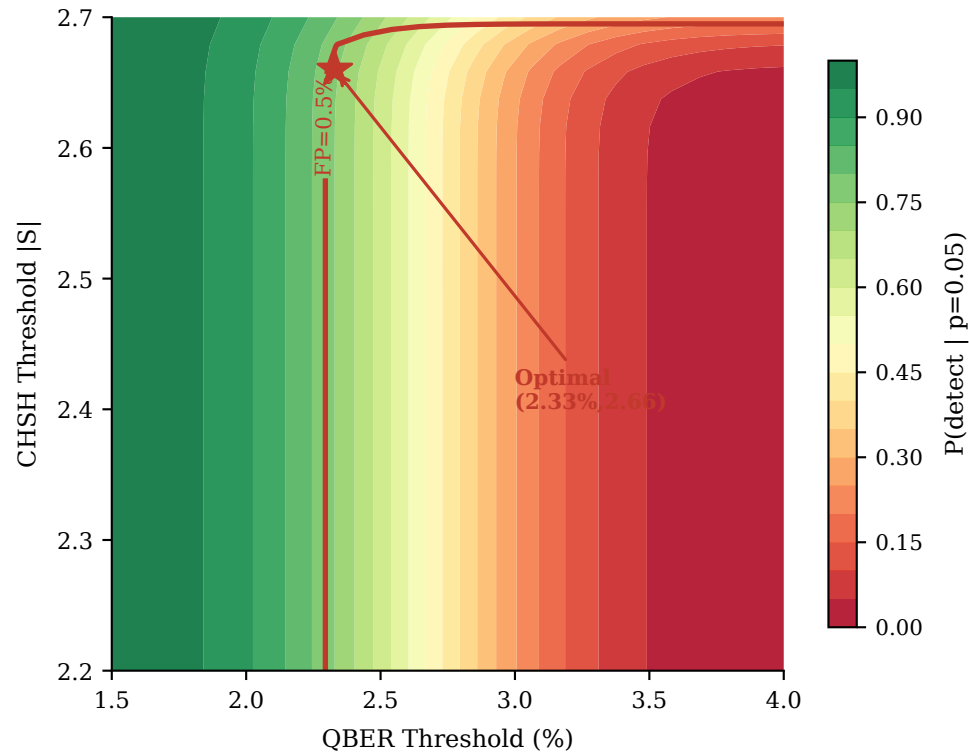

Fig. 6 — CHSH/QBER Abort Threshold Co-optimisation
Optimal: CHSH=2.66, QBER=2.33% $\rightarrow$ FP=0.40%, $P(\text{detect} | p=0.05)=75.6\%$

**(a) Detection Probability
at $p=0.05$**

**(b) False-Positive Rate (%)
(lower-right = fewer false aborts)**
